

IoT Management Dashboard

Keeping a close eye on things just got easier

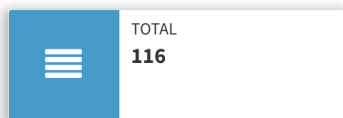

Our newly introduced IoT management dashboard allows you to stay on top of your IoT tracker quotas thereby helping you to plan future usage and orders.

Shipit.to's IoT trackers turn the most basic building blocks of your supply chain - your cargo - from passive to interactive.

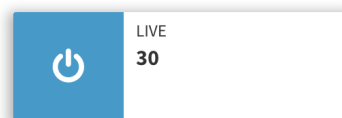

When deployed across your supply chain this gives you access to insights previously unavailable to your organisation.

The IoT management dashboard is located at the top of the tracker list and works in tandem with the existing filters to provide you with a quick summary of your company's stock of IoT trackers and their usage status:

The total number of trackers which are assigned to your account.

The total number of trackers which are assigned to your account and which have transmitted their status in the time period set by the 'Last Broadcast' filter.

About the Shipit.to Platform

Shipit.to is a digital logistics platform for supply chain management & shipment tracking. With Shipit.to you have an affordable shipment-tracking solution that provides real-time information about your shipments' location and condition. Based on shipit.to's disposable trackers, this service enables companies of any size to join the IoT revolution and track their cargo.
