

Notification Settings

The Choice Is Yours

The shipit.to platform provides two categories of events, which may be received as live alerts via either email message or API push messages:

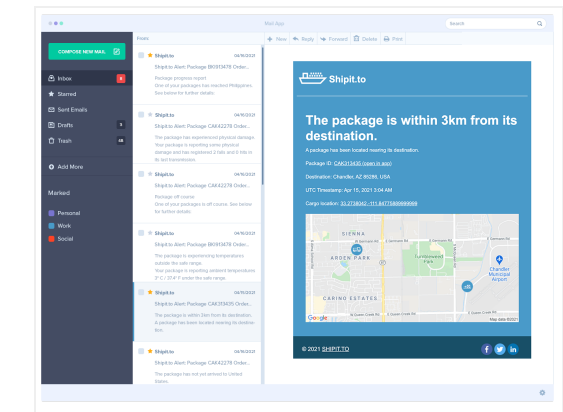

CORE - Cargo Operational Real-time Events

provide you with up to date information about each shipment's operational status and are used primarily to report about the ambient conditions of the cargo.

Use Shipit.to to monitor the progress and condition of your shipments with real-time alerts and notifications.

SCOPE - Supply Chain Operational Progress Events

provide you with live updates regarding the progress of your shipment - whether it is stationary, nearing its destination, entering predefined geofences, etc.

To help you focus only on the information that is relevant to you and the work you do, we've now added the option to choose exactly which events you wish to be updated about via our live alerts.

About the Shipit.to Platform

Shipit.to is a digital logistics platform for supply chain management & shipment tracking. With Shipit.to you have an affordable shipment-tracking solution that provides real-time information about your shipments' location and condition. Based on shipit.to's disposable trackers, this service enables companies of any size to join the IoT revolution and track their cargo.
