

Share shipment information

Keep your customers engaged

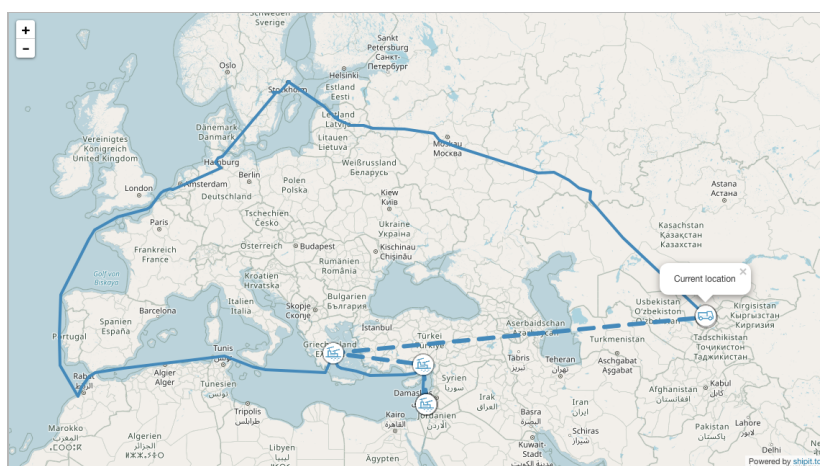

Ecommerce platforms allow you to reach a wide range of customers through the Internet. Your team spends a lot of thought and planning to ensure that the purchasing process on these platforms keeps the customer engaged and guarantee that a sale goes through. However, from the time the product is purchased and until it is delivered you are no longer in direct contact with the customer and at the same time the customer is in the dark with regards to the actual shipment status.

Shipit.to is built to help you increase customer satisfaction by providing visibility & predictability, informing of delays and potential problems in time, and by reducing friction with service personnel.

Share your information

Shipit.to's sharing features allow you to reach your customers by sharing any shipment's information from both the web portal and the shipit.to mobile apps.

Choose whether to share a shipment's route and current location on a beautiful map or a more detailed view of the shipment's itinerary including all seaports, airports, flights, shipping lines, pickup and dropoff locations, and more.

Example of a shareable shipit.to map showing a complete shipment's journey.

Use Shipit.to to reach your customers while they're waiting for their purchase via smartphone apps, social sharing links & email messages.

This can also help you extend your brand exposure to the shipping phase of the customer journey.

About the Shipit.to Platform

Shipit.to is a digital logistics platform for supply chain management & shipment tracking. With Shipit.to you have an affordable shipment-tracking solution that provides real-time information about your shipments' location and condition. Based on shipit.to's disposable trackers, this service enables companies of any size to join the IoT revolution and track their cargo.
